

Sierra 10 Pergola

How big is the Sierra pergola?

It is a 10 feet by 10 feet. You can add a 10 foot by 10 foot extension to make it 10 by 20 or even 10 by 30 (or longer!).

What is the pergola made out of?

The pergola is constructed with Canadian cedar wood. The stain on the wood contains as many UV inhibitors as possible, which slows down fading. The wood is also dipped in stain to ensure the best coverage.

Does the wood fade quickly?

The pergola loses its stain at an average of 10 percent every year. We suggest staining every third year. Stain colors are very compatible and can be found at any paint store.

Does it need to be fastened down?

All pergolas come with fastening devices and fastening is recommended.

What other options are available with this pergola?

We have optional side privacy walls (SIERRA10-WALL-K) and optional lattice roof panels (SIERRA10-LATT). There can be up to three privacy walls. The lattice roof panels are removable by “popping” them up from the underside.

How is the pergola shipped?

- 1 crate for the pergola,
- 1 box for 3 roof panels (3 boxes for a complete 9 paneled roof)
- 2 boxes for 1 privacy wall

Are the pergolas hard to assemble?

No! Two people can easily assemble them in about two hours!

What is the warranty?

- 1 year warranty structure
