**INTRODUCING COOK NUMBER® GRILLS FROM
FIRE STONE HOME PRODUCTS™
First Grill Line To Conserve Half As Much Energy As Other Grills**

MINNEAPOLIS, (January 08, 2008) -- According to the Hearth Patio and Barbeque Association there are 59 million grills in the United States. Of those grills, the average BTU usage is 60,000 an hour. If consumers grill twice a week, that's a whopping annual BTU consumption of 6,240,000 over an entire year. That translates to just over one barrel of crude oil per household, just to use their grill. Now consumers who are environmentally conscious can be green grillers with Fire Stone Home Products Cook Number Gas Grills, which consume half as much energy as the average gas grill. Combining electronics with convection technology and patented single-burner efficiency, Fire Stone's new grills make 30,000 BTU's cook like 60,000.

Fire Stone's Cook Number Grills are the most energy efficient line of grills on the market today. Available in gas or electric models, these grills last longer and help reduce the environmental impact a conventional grill has. Fire Stone's electric Cook Number Grill has a highly-efficient design that costs only 10-15 cents per hour to operate, which is less than 10% of the energy required for 60,000 BTU grill.

"Gas grills have become synonymous with multiple burners and increasingly higher gas consumption," says Dan Shimek, Fire Stone owner and president. "With today's energy concerns, finding a way to conserve carbon footprints while grilling must not be overlooked. Our Cook Number Grills are the first product on the market to address this concern. If half of the gas grillers in the U.S. converted to our electric grill, \$1 billion could be saved per year and environmental impact would be significantly lowered."

Introducing Fire Stone Cook Number Grill

January 08, 2008

Fire Stone's Cook Number Grills are designed with 10 precise settings that take the guesswork out of grilling. The system is designed to be foolproof and ensure safety without the risk of overcooking food. Simply set the internal temperature, insert the food temperature sensor and shut the hood. The grill signals when the food is done with a visual and audible alert.

Fire Stone Cook Number Grills are available in a variety of models and features and retail from \$379 to \$2,099.

Founded by industry veteran Dan Shimek, co-founder of Heat-n-Glo fireplaces, Fire Stone Home Products develops unique, upscale products exclusively for outdoor living. Fire Stone's Outdoor GreatRoom® products include grills (gas and electric), grill islands, gas lights, fireplaces, campfires, heaters, outdoor furniture, pergolas and more. At Fire Stone, our goal is to improve the beauty, value, warmth, and comfort of the living areas outside the home through innovative technology and design.
