Fire Stone Home Products' Cook Number Gas Grill uses convection technology.

Green grill cuts down on energy use

Warmer weather means people are getting out their grills again, but at what cost to the environment?

If you're concerned about being green, check out **Fire Stone Home Products' Cook Number Gas Grill**, which uses convection technology to cut in half the amount of energy needed to cook food. The grill is designed with 10 settings, including a temperature sensor to insert in food to tell you when it's done.

The grill is available in various models, gas or electric, and retails from \$379 to \$2,009. Check it out online at www.firestonehp.com.
