Pine Ridge Fire Pit Table

Installation Instructions for Pine Ridge fire pit models PR-1242-K and PR-2424-K
Contents

Required Tools.................................................2
Placing and assembling the Table..............3
Gas Connection.................................................4
Igniter Installation.............................................6
Locating Propane tank.................................7
Finishing Touches.............................................7

Required Tools

- Utility Knife
  To cut and remove packaging
- 2 Open Ended Wrenches
  To secure gas connections
- Leather Gloves
  To protect hands from rough edges found on coffee table during installation.
- One AAA battery (not Included)
  Required for electric spark igniter installation
- Two people are required for this installation
Assembly Instructions

1. Open packaging and remove the access door before removing the fire pit base from the box.

2. Set the base in the desired location and set concrete top onto base. Replace access door.
Gas Connections

Read and understand your Crystal Fire owner’s manual before beginning burner hookups or using the device. Do not use Teflon tape or pipe dope on flare fittings.

1. Reach inside the burner cut-out and attach natural gas supply line using a 3/8” flare fitting, or attach the included black rubber propane hose and regulator to the bottom fitting of the control valve.

TIGHTEN SECURELY WITH A WRENCH

2. Lay the burner upside down on a flat, soft surface to avoid scratching the polished metal. Ensure the correct orifice is installed for the fuel type you are using (see Crystal Fire user manual included with burner for orifice sizing information) Attach the included metal flex hose to the burner.

TIGHTEN SECURELY WITH TWO WRENCHES
3. Set the burner into the fire pit exactly as shown and make final gas connection to the control panel.
Igniter Installation

1. Make sure the valve is in the OFF position before beginning.
2. Install sparker as shown, using an AAA battery (not included).

Sparker will not operate correctly without an ignition and ground wire attached.

- Plug both BLACK wires hanging from the burner into the back of the sparker box. If an orange wire is present, do not use it. Orange wire is for automatic ignition system add-on only.

- Test system by pushing the button on the igniter. Consult the troubleshooting section if spark is weak, intermittent, or not present.
After installing igniter and making gas connections, verify that they are tight and that no leaks are present using a solution of soapy water or a commercially available leak-check solution.

Position Your Tank
(if applicable)

1. Remove door, connect the propane hose/regulator to the propane tank and hand-tighten (DO NOT USE A WRENCH) and slide the propane tank past the dotted line to ensure the door closes properly. This process is the same for both rectangular and square Pine Ridge models.
2. With tank inside base, ensure that no hoses, wires, or anything else is kinked or touching the burner pan.

Finishing Touches

- Scatter the included glass beads evenly on to burner surface using all of the beads that came with your fire pit.

**DO NOT BURN WITHOUT GLASS OR OTHER DECORATIVE MEDIA PRESENT**
IMPORTANT

Please consult your Crystal Fire instruction manual for detailed instructions and important information related to hooking up your linear burner, including safety information, proper tightening of connections with two wrenches and full burner setup and lighting instructions.

DO NOT ATTEMPT TO INSTALL CF-1242 or CF-2424 BURNER WITHOUT FIRST CONSULTING THE CRYSTAL FIRE OWNER’S MANUAL.

WARNING

After consulting the manual and following instructions, remember; before operating, all gas connections must be fully checked for leaks.

Warranty: Fire pit tables are covered under a 1-year manufacturer’s warranty. Please visit http://www.outdoorrooms.com/warranty-form to register your product.
