Due to various circumstances such as damage from shipping and handling, misuse or general wear and tear, it may be necessary to replace the drawer slides on your fire table. This instruction will go through the steps to fix or replace the drawer slide.

“Drawer Not Sliding Well”

- Just like anything with moving parts used outdoors, your slides may require lubrication from time to time. Lubricating the slides will help keep them running smoothly and extend the life of the slides.
- Any spray lubricant, such as WD-40, can be used to spray into the bearings of the drawer slide. After lubricating both slides, slide the drawer back and forth a few times to spread out the lubrication.
- It is recommended to lubricate slides at least once a year to keep them operating smoothly.
- **CAUTION:** Lubricants can be flammable! Do not spray lubricant while the fire pit is operating. Make sure the gas supply is turned off, disconnect and remove propane tank from the table before spraying lubrication.

“Drawer Has Fallen Off”

1. If the drawer comes off the tracks, and is not broken, the drawer can easily be re-assembled.
2. If only one side has come off, remove the other side to completely remove the door from the slides, this will make it easier to replace the door. To remove the door from the slide, press up or down (depending on the side) on the plastic clip (1), and pull the door off of the track (2).
3. Check to make sure the plastic clips on both of the slides are not damaged, and that no ball bearings have fallen out of the slides. If the slides are damaged it may be necessary to replace them.
4. Align the mounts on the tank tray with the slides mounted to the interior of the base. Two people may be required for this step, one to hold the door/tank tray assembly and one to guide the mounts into the sliders.
5. Insert the mounts into the slides (3), keep outward pressure on the slide mounts as you push them into the slides (4) to keep them properly aligned. Push until you hear a click on each side of the slide. The first time you insert the drawer, it may require a bit of force to fully close the door, after this the drawer should slide in and out with ease.
“Slide is Broken, Needs Replacement”

1) If the Slide is broken or beyond repair, a set of replacement slides will be needed.

2) Remove the drawer from the base by following the instructions in the “Drawer Has Fallen Off” Section

3) Begin the replacement by removing the mounts from the door/tank tray assembly. Remove 4 screws and nuts holding the mounts in place, save for replacement of new slides.

4) Remove the slides from the inside frame of the fire pit by removing the sheet metal screws holding them in place. NOTE: the alignment of the slide is critical, it may be useful to replace one slide at a time so you can reference the screw placement from the other side.

5) Remove the mount from the new slide by pressing on the lever and pulling apart to separate the mount and the slide. Repeat for other slide.

6) Attach the slides to the frame of the table with sheet metal screws, use the same hole locations as the old slide.

7) If the holes in the base are stripped, it may be necessary to drill them out using a 3/16” drill bit, and assemble with a #8-32 Screw and nut.

8) Assemble the new mounts onto the tank tray, using the nuts and bolts from step 3.

9) Replace door into base, following instructions in “Drawer Has Fallen Off” section.
